

CodeHub Cloud

Customer Handbook — Plans, Billing, Support & Security

Version 3.2 · Effective 1 September 2026

1. About CodeHub Cloud

CodeHub Cloud is a managed platform for hosting web applications, background workers and PostgreSQL databases. Customers deploy directly from a Git repository: every push to the configured branch triggers a build, and a successful build is rolled out with zero downtime. CodeHub operates data centres in Frankfurt (eu-central), Dublin (eu-west) and Virginia (us-east). EU customers' data never leaves the EU unless the customer explicitly selects a US region.

This handbook describes what every customer can expect from CodeHub: the plans and their limits, how billing and refunds work, our support response times, our uptime commitment and how we protect customer data. Where this handbook and a signed Enterprise agreement differ, the signed agreement prevails.

2. Plans and Pricing

CodeHub offers four plans. All prices are in euros and exclude VAT.

Plan	Price / month	Apps	Build minutes	Support
Hobby	EUR 0	1	300	Community forum
Starter	EUR 19	5	2,000	Email, business hours
Team	EUR 79	25	10,000	Email + chat, 24/7
Enterprise	From EUR 1,200	Unlimited	Unlimited	Dedicated engineer, 24/7

Annual billing gives a 20% discount on the Starter and Team plans. Extra build minutes cost EUR 0.008 per minute. Hobby apps go to sleep after 30 minutes without traffic and wake up on the next request, which usually takes 5 to 10 seconds. Starter, Team and Enterprise apps never sleep.

Customers can upgrade at any time; the upgrade takes effect immediately and the price difference is charged pro rata. Downgrades take effect at the start of the next billing cycle. Students and registered non-profit organisations receive the Team plan at a 50% discount after verification by the sales team.

3. Billing and Refunds

3.1 Billing cycle

Subscriptions are billed on the same calendar day each month, starting from the day of sign-up. CodeHub accepts Visa, Mastercard, American Express and SEPA direct debit. Enterprise customers can also pay by bank transfer against an invoice, with 30-day payment terms. Invoices are available in the dashboard under Settings → Billing and are also emailed to the billing contact.

3.2 Failed payments

If a payment fails, CodeHub retries the charge after 3 days and again after 7 days. If the third attempt also fails, the account is moved to read-only mode: running apps keep serving traffic, but new deployments are blocked. After 21 days without payment, apps are stopped. Data is kept for a further 30 days before permanent deletion.

3.3 Refund policy

- New subscriptions can be cancelled within 14 days for a full refund, no questions asked.
- Duplicate charges are always refunded in full. Refunds are processed within 3-5 business days and appear on the card statement within 10 business days, depending on the bank.
- Unused months of an annual plan are refunded pro rata if the customer cancels within the first 6 months. After 6 months, annual plans are non-refundable.
- Usage-based charges (extra build minutes, bandwidth) are never refunded, except when the usage was caused by a CodeHub incident.
- Refund requests are submitted via the dashboard (Settings → Billing → Request refund) or by email to billing@codehub.example.

4. Support and Response Times

Every support ticket is assigned a severity level by the customer when it is opened. The support team may re-classify a ticket if the description does not match the chosen level. Response time is measured from the moment the ticket is opened until the first reply from a human engineer (automated acknowledgements do not count).

Severity	Definition	Starter	Team	Enterprise
Critical (P1)	Production down or data loss	8 hours	1 hour	15 minutes
High (P2)	Major feature broken, no workaround	1 business day	4 hours	1 hour
Normal (P3)	Issue with a workaround available	2 business days	1 business day	4 hours
Low (P4)	Question or feature request	5 business days	2 business days	1 business day

Business hours are Monday to Friday, 09:00-18:00 Central European Time, excluding public holidays in Greece. Team and Enterprise customers receive 24/7 support for P1 and P2 tickets. Hobby users are supported through the community forum only, with no guaranteed response time.

For P1 incidents on the Enterprise plan, the customer's dedicated engineer joins a video call within 30 minutes if requested, and status updates are posted every hour until the incident is resolved. After every P1 incident, CodeHub publishes a written post-mortem within 5 business days.

5. Uptime Commitment (SLA)

CodeHub guarantees 99.9% monthly uptime for Team plans and 99.95% for Enterprise plans. The Hobby and Starter plans have no uptime guarantee. Uptime is measured every minute from three independent locations; a minute counts as down when at least two locations cannot reach the platform. Scheduled maintenance announced at least 72 hours in advance does not count as downtime and is always performed between 02:00 and 05:00 local region time.

If monthly uptime falls below the guarantee, the customer receives service credits:

Monthly uptime	Service credit (% of monthly fee)
99.0% - 99.9%	10%
95.0% - 99.0%	25%
Below 95.0%	50%

Credits must be requested within 30 days of the end of the affected month and are applied to the next invoice. Credits are not paid out in cash and cannot exceed 50% of the monthly fee. The live status of all regions is published at status.codehub.example.

6. Security and Data Protection

All data is encrypted at rest with AES-256 and in transit with TLS 1.3. Database backups are taken every 24 hours on Starter, every 6 hours on Team and continuously (point-in-time recovery to any second) on Enterprise. Backups are retained for 7 days on Starter, 30 days on Team and 90 days on Enterprise, and are stored in a different data centre from the primary database.

CodeHub is ISO 27001 certified and completes a SOC 2 Type II audit every year. Reports are available to Team and Enterprise customers under NDA. CodeHub acts as a data processor under the GDPR and signs a Data Processing Agreement (DPA) with every paying customer on request.

Two-factor authentication is mandatory for all accounts with admin rights. Enterprise customers can enforce single sign-on (SAML or OIDC) for their whole organisation. Access by CodeHub staff to customer data requires explicit customer approval and is recorded in an audit log visible to the customer.

Security vulnerabilities can be reported to security@codehub.example. CodeHub runs a responsible disclosure programme and pays bounties of EUR 200 to EUR 5,000 depending on severity. Confirmed security incidents that affect customer data are reported to the affected customers within 72 hours.

7. Account Closure and Data Retention

Customers can close their account at any time from Settings → Account → Close account. All apps are stopped immediately. Customer data, including databases and backups, is kept for 30 days so that the account can be restored, and is then permanently deleted. Customers can request immediate deletion by email; in that case data is deleted within 72 hours and a deletion certificate is issued. Invoices are kept for 10 years, as required by Greek tax law.

8. Frequently Asked Questions

Can I use my own domain? Yes. Custom domains are available on every plan, including Hobby. TLS certificates are issued and renewed automatically through Let's Encrypt.

Can I move my app to another region? Yes, on Team and Enterprise plans. Region migration is self-service and requires a maintenance window of about 15 minutes for apps with a database.

What happens if I exceed my build minutes? On Starter and Team, extra minutes are billed at EUR 0.008 per minute. On Hobby, builds are paused until the next month.

How do I contact sales? Email sales@codehub.example or book a call from the pricing page. The sales team answers within one business day.
